

Study Abroad: How to get started!

Studying abroad is a great opportunity to see the world, appeal to your adventurous side, and step beyond your comfort zone. You will experience new possibilities, make lifelong friends, and immerse yourself in a different culture, all while completing your engineering degree.

Choose a program

Trying to figure out where to start? Consider location, courses, and cost.

We have a list of program options for engineers at bit.ly/pick-prog.

Meet with a Global Engineering Fellow

Get first-hand information from engineering students who have already studied abroad. Our Global Fellows have weekly virtual and in person office hours available.

Schedule with any of them or an adviser at bit.ly/gee-schedule.

Academic planning

Consider the types of courses you want to take, and review course options for your program of interest. Plan to meet with your academic adviser or a faculty adviser to discuss academic planning. Remember to review the historical course list and the course equivalency process.

Go to bit.ly/find-classes to find courses available, as well as previously approved courses.

Research funding and scholarships

There are many opportunities to help fund your engineering study abroad experience. Be sure to be mindful of the requirements and deadlines for these as well.

Visit bit.ly/fund-opp to see more.

Complete and submit your application

Start and submit your application by the deadline. Late applications will not be accepted.

Find timelines, instructions, and more information at bit.ly/abroad-app.

Your application is approved!

Congratulations, Penn State approved your study abroad application! Remember to complete any institution requirements for your study abroad program, and get ready to go!

Go to bit.ly/accepted-next to learn more.

Questions? Visit us in 208 Hammond Building or email international@engr.psu.edu.
