Mikael Enelund is a professor in structural dynamics and dean of education in mechanical, automation and mechatronics, industrial design, and marine engineering at Chalmers University of Technology, Sweden. Enelund’s research interests include curriculum design, vascular mechanics, and structural dynamics. Enelund is leader of Chalmers Tracks, an initiative to create and implement a new educational model to give students the opportunity to work with people with different backgrounds, to create multi-and interdisciplinary competencies, meet their expectations and need for a more individualized study plan, and shorten the lead times for changing the education to embrace new technologies and new materials.

Jason Z. Moore received his doctorate from the University of Michigan in 2010 and joined Penn State as an assistant professor in 2011. He is currently an associate professor of mechanical engineering and director of the Precision Medical Instrument Design Laboratory. Moore’s research interests include studying the interaction between medical instruments and bone and tissue in the body and utilizing mechatronics to improve medical training and physical therapy devices. For the last 10 years in teaching Professor Moore has worked to develop and implement innovative mechanical design class curriculums that aim to provide students with experiential learning and help further develop students’ engagement in community service and global competencies.
