Jennifer Keenahan is an assistant professor and head of teaching and learning in civil engineering at University College Dublin. She has been awarded a professional diploma in university teaching and learning and is a published author with the European Journal of Engineering Education. Every year, she teaches over 300 engineering and architecture students in first, second, and third year of their programs.

Kevin Nolan is an assistant professor in the UCD School of Mechanical and Materials Engineering where he teaches mechanics of fluids. His novel approach to education involving sophisticated 3D animation with interactive notebooks has been recognized internationally. He recently completed a professional diploma in university teaching and learning. He has leveraged his current research on the fluid dynamics of COVID-19 for both public outreach and educational activities.

Vikram Pakrashi, Chartered Engineer, is an associate professor in the UCD School of Mechanical and Materials Engineering where he teaches dynamics and vibrations. His research synthesizes fundamental physics, sensors, and analytics to deliver industry-oriented problems. He is the director of the Dynamical Systems and Risk Laboratory, which won the Education Laboratory of the Year 2020 at the Irish Laboratory Awards.
