

Why Do Ethics Matter for the Future Engineers?

Saman Saghafi obtained a bachelor's degree in computer software technology. He then shifted his academic field of interest to incorporate the humanities and other interdisciplinary fields of study. As a consequence, he started using technologies for the purpose of researching ideas relevant to humanity. Before joining the Responsibility in Science, Engineering and Technology (RESET) master's program at Technische Universität München (TUM) in 2019, he completed two master's programs: history of science at the University of Isfahan and science and technology policy at Shahid Beheshti University. He currently works at the TUM Institute for Cognitive Systems (ICS) department where he focuses on both human-centered design and engineering education.
